

PROJECT

SPOTLIGHT

American Structurepoint teamed with Bowen Engineering to design and construct the first phase of the transformative **IU Health Downtown Indy**, a 44-acre campus expansion in Indianapolis for IU Health. This project follows the campus master planning efforts American Structurepoint completed in 2020, and it includes significant utility relocation work to enable construction of the \$1.6 billion hospital.

The new hospital, located just south of the existing IU Health Methodist Hospital, is scheduled to open in 2026. This hospital will consolidate the current Methodist Hospital with the existing IU Health University Hospital on IUPUI's campus.

American Structurepoint is proud to be providing multiple services—utility infrastructure, civil and structural engineering, land surveying, environmental services, and transportation and traffic—to advance this complex revitalization in downtown Indianapolis.

We are also grateful to our subcontractors, Applied Engineering and Powers Engineering, who are assisting with this revitalization.

American Structurepoint improves the quality of life for the communities we serve. We are grateful for the opportunity to revitalize this area in downtown Indianapolis to advance IU Health's goals.

AMERICAN STRUCTUREPOINT IS A FULL-SERVICE ARCHITECTURE AND ENGINEERING FIRM.
